

**\*\*Title: Environmental Contaminant Analysis Report\*\***

**\*\*Unique ID: TDLab-2024-006\*\***

---

**\*\*Test Laboratory: EnviroSafe Analytics\*\***

**\*\*Date: January 26, 2024\*\***

**\*\*Test Summary:\*\***

This report presents the results of environmental contaminant analyses conducted at EnviroSafe Analytics. The primary objective of these tests is to assess the presence of various pollutants and contaminants in environmental samples, ensuring the safety and well-being of the analyzed area.

---

**\*\*Test Components:\*\***

1. **\*\*Water Quality Analysis:\*\***

- Heavy Metals (Lead, Mercury, Cadmium)
- Microbial Contamination (Coliforms, E. coli)

2. **\*\*Air Quality Assessment:\*\***

- Particulate Matter (PM10, PM2.5)
- Volatile Organic Compounds (VOCs)

3. **\*\*Soil Contamination Screening:\*\***

- Pesticides and Herbicides
- Polycyclic Aromatic Hydrocarbons (PAHs)

4. **\*\*Radiological Analysis:\*\***

- Radon Levels

---

**\*\*Summary of Findings:\*\***

The environmental contaminant analysis results indicate that the tested area meets safety standards for all parameters assessed. No significant levels of pollutants or contaminants were detected in the water, air, soil, or in terms of radiological exposure.

---

**\*\*Recommendations:\*\***

Based on the favorable outcomes, EnviroSafe Analytics recommends periodic monitoring of environmental conditions and adherence to best practices in environmental testing. Continuous updates to testing methodologies and staff training will contribute to maintaining the high quality and accuracy of our environmental contaminant analyses.

---

**\*\*Conclusion:\*\***

This Environmental Contaminant Analysis Report reflects the commitment of EnviroSafe Analytics to providing reliable information about the environmental safety of tested areas. The absence of significant contaminants affirms our dedication to environmental health and safety.
